GREASE INTERCEPTOR SIZING

To Determine the Flow Rate of Each Sink:

1. Calculate capacity of the sink in cubic inches: Length x width x depth = ____ cu. in.
2. Convert capacity from cu. in. to gals per min. (GPM): ____ cu. in. ÷ 231 = ____ GPM.
3. Adjust for displacement: ____ GPM x .75 = ____ GPM.
4. Result is the flow rate required to drain the sink in one minute.

Note: If drain down time is not critical, an interceptor with a lesser flow rate up to 1/2 the calculated flow may be specified. Discharge from spray hoods is determined by the flow rate of the hood.

It is not recommended to pass commercial dishwashers through an interceptor

Example

Three compartment pot sink, each compartment 12" x 20" x 12"

1. 12" x 20" x 12" = 2880 cu. in. x 3 compartments = 8640 cu. in.
2. 8640 cu. in. ÷ 231 = 37.4 GPM.
3. 37.4 GPM x .75 = 28.05 GPM.

A 35 GPM interceptor would permit the sink to drain in slightly less than one minute.

*Certified to standard PDI-G101 supplied with external flow control.
